### Abstract

In the ongoing Pandemic, it is important to know that sick cellular culture can influence healthy cellular culture from a distance and make the healthy culture sick. This article explains how this is done. Everything material is a material body and nonlinear electromagnetic field (NEMF) that comes from the way the material world is created - it is explained in another article of mine. If so, when we have two cultures at some distance from one another, we have two NEMFs interacting from a distance with one another. Since the fields are nonlinear, one of them can entrain the other to operate at the same frequencies. The NEMF1 of a sick culture with frequencies modified by a virus entrains the NEMF2 of a healthy culture and as a result the healthy culture becomes sick. However, all living beings (humans, animals, and plants) have a second NEMF - the NEMF of the Spirit seen as aura (NEMFS), which is magnetically attached to the NEMF of the material body. (Thus, all living beings are a material body with its NEMF and magnetically attached to it NEMFS of the emotional Spirit, which makes all living beings emotional). The distant action explains the fact that the medical doctors live only 58.5 years, while the rest of the population lives 75 years. It is because the doctors' (NEMF + NEMFS)s are entrained (influenced negatively) by the (NEMF + NEMFS)s of their sick patients.

Keywords: distant interactions, distant interactions of cellular cultures, distant infection of cellular cultures, explaining distant interaction, distant interaction doctor-patient.

### 1 | INTRODUCTION

In 1923, the Russian scientist A.G. Gurvich first observed and described this phenomenon -

healthy cellular culture was dying when placed at a distance from a dying cellular culture when both cultures were in quartz vessels. He found that there was weak electromagnetic photon-transfer in the UV-diapason between the dying and healthy cellular cultures. Gurvich called the transferred energy “biofield” and according to him it was specific for all living systems. It was super-weak electromagnetic field and he called it “spontaneous light emission” (1). He found that roots of onions and beans, and also brain, blood, and eye-tissues also emitted in the UV-diapason and their healthy emission was stimulating the growth of yeast cells (1).

In 1931, Raevski recorded the UV-emission with Geiger-Muller counter. He reported that dying cells emitted in the UV-diapason. He also found that working muscles were emitting 1,000 UV-quants, while onion roots were emitting 100 to 200 UV-quants (1). In 1951, Steller reported that green leaves also emit in the UV-diapason (1). In 1961, Russian scientists found that the liver and the muscles of live mice emit in the visible diapason, while carcinogenic agents emit in the IR-diapason. In 1964, the Russian Acad. V. Kaznacheev claimed that this weak biofield has informational character and he calculated that 1 UV-quant carries 50 bits of information (1).

In 1965, Acad. V. Kaznacheev proclaimed that this is info-regulating electromagnetic field, which integrates the cells and harmonizes their functioning, but according to him it is a product of the chemical transformations in the cells (1) (which is not right). And this was what Kaznacheev still claimed in 1981 in his book: “The Super-weak Emission in Intercellular Interaction”. I underlined in my article: “How the Material World Was Created – Origin of Its NEMF” (2) that the whole material world was created by Black Holes of anti-matter and the non-linear electromagnetic field (NEMF) that separated the matter from the anti-matter got imprinted on all material creations.

## 2 | EVERYTHING MATERIAL IS A MATERIAL BODY AND NEMF

Thus, the whole material world is a material body and light NEMF. What do I mean by this? Imagine you have the substance sulfur, for example. As every material substance, the sulfur has a material body and NEMF. The waves of the NEMF scan the environment (atmospheric pressure and temperature) and send information to the material sulfur how to arrange its atoms to best fit the environmental conditions (3). In different environment the sulfur will crystalize differently. In material science, Casimir first described this field and it is known under the name Casimir force (4), but actually it is electromagnetic force and it is the weak nonlinear electromagnetic field (NEMF) of the material (2). This weak informational NEMF makes all materials to be self-organized and in dynamic equilibrium with the environment.

The only way to create a system that is: 1/ adaptable to any environmental changes, and 2/ capable to farther develop, is system in dynamic equilibrium. Since the Creators created everything in their image, I truly believe that the Creators just as the stars are electromagnetic vortex on top of electromagnetic anti-vortex in dynamic equilibrium (5). This explains why the gravitational forces of stars and planets are much weaker than the electromagnetic forces (6) – it is because sticking electromagnetic vortex on top of electromagnetic anti-vortex neutralizes most of the electromagnetic energy (6). The dynamic equilibrium of the system vortex <--> anti-vortex explains the cycles of activity of the Sun (5) and the other stars.

## 3 | THE EMOTIONAL NEMF OF ALL LIVING BEINGS

In all living being the NEMF of the material body is intertwined magnetically with a second NEMF (the NEMF of the Spirit - NEMFS), which we see as aura. I measured aura’s field for almost 40 years – it is 1,000 times weaker than the electromagnetic field created by the biocurrents of the material body. I had to develop super-sensitive equipment to be able

to measure it. I found that it is NEMFS is a weak informational field, which rules and regulates everything in the body not with its strength, but with the information it carries. I found out that aura's NEMF (NEMFS) is emotional – when we experience positive emotions (or just think positively) we are in high Spirit and our aura is brighter; when we experience negative emotions (or just think negatively) we are in low Spirit and our aura is dimmer.

Based on this I decided that our aura must be our Spirit. Recently, I found that the fact that our aura is our Spirit was known a few thousand years ago - the Jewish Kabala for high priests was teaching it. Aren't most of the discoveries well-forgotten ancient wisdom? Our Spirits are holographic template of the holograms of the Creators, who created everything in their image. Since our Spirits are emotional, the Creators must also be emotional, i.e. the light plasma of their NEMFs have emotional imprint on it.

All living beings are a material body with its NEMF and emotional Spirit with its NEMFS (the stars don't have this only the living beings do). However, just like the stars' NEMFs are vortex on top of anti-vortex, the NEMF of all living beings (humans, animals, and plants) for males are vortex (NEMF of the Spirit, i.e. NEMFS) on top of anti-vortex (NEMF of the material body) and they are in dynamic equilibrium, which allows them to self-organize. This is for males, for females it is vice-versa (7).

#### 4 | THE SELFORGANIZING ABILITIES OF THE NEMF

A good example of self-organizations is splitting the androgynous NEMFS of the Creators to create male and female NEMFSs (Spirits). Since the Creators created everything in their image, probably their androgynous Spirits' NEMFS are like that of our Sun only they are emotional. Probably, just like the Sun, they are torus shape with two chains of alternating vortices and anti-vortices running parallel to the equator and spinning in opposite direction in northern and southern hemispheres. This means that the northern and southern hemispheres spin in opposite direction, i.e. they are coupled vortex <-->

anti-vortex in dynamic equilibrium.

To form male and female NEMFSs (Spirits) from the androgynous NEMFS of the Creators, the androgynous NEMFS was split through the equator. From the northern hemisphere of the Creator's NEMFS, the male NEMFS (Spirit) was created, from the southern hemisphere the female NEMFS (Spirit) was created. Since the NEMFSs (Spirits) of the male and female spin in opposite direction, males and females are attracted to each other magnetically (8).

During the day, which is the active period, the male Spirit (NEMFS) is a vortex spinning clockwise and sucking NEMF energy from the Space Matrix to be active. It is magnetically attached to the NEMF of the male material body, which is anti-vortex spinning counterclockwise. During the night, which is time to rest and sleep, the NEMF of the male Spirit (NEMFS) spins in opposite direction (like an anti-vortex) and emits NEMF energy to the Space Matrix, which is NEMF – from the connection of males to the Space comes the concept of Father God in Heaven.

During the day, which is the active period, the female Spirit (NEMFS) is anti-vortex spinning counterclockwise and sucking energy from the Earth to be active. It is magnetically attached to the NEMF of the female material body, which is a vortex spinning clockwise. During the night, which is the time of rest and sleep, the NEMF of the female Spirit (NEMFS) spins in opposite direction and releases NEMF energy to the Earth – from the connection of the females to the earth comes the concept of Mother Earth.

However, after the split of the androgynous NEMFS of the Creators through the equator to form NEMFS of the two genders, each gender has only one chain of alternating vortices and anti-vortices. Since the NEMFS (Spirit) + NEMF (material body) have the ability to self-organize, this chain is now at the center of the torus along the axis of spinning, which is along the backbone of humans. The alternating vortices spinning clockwise and anti-vortices spinning counterclockwise are called “chakras,” which mean “spinning wheels” in Sanskrit (9).

Yoga wisdom teaches that the spinning of the chakras turns to opposite at dawn and dusk and this is the best time to balance the chakras. However, the changed direction of chakras' spinning at dawn

and dusk means changed direction of spinning of the Spirit's NEMF (NEMFS) to opposite at dawn and dusk. However, since in all living beings the NEMF of the united material body and Spirit is a combination of vortex and anti-vortex in dynamic equilibrium, their NEMF has torus shape as the androgynous NEMFS of the Creators and the NEMF of the stars.

I was able to measure the chakras with my sensitive equipment and some of my measurement can be found in [9]. Dr. Popp, who spend his entire life studding the human light NEMF, found that the human NEMF (seen as aura) is capable to resonate to external influences in the whole diapason of frequencies: low frequencies -> UV -> visible -> IR -> and the NEMF frequencies of the Earth and Sun (1)

## 5 | HOW A DISTANT SICK CELLULAR CULTURE MAKES A HEALTHY CELLULAR CULTURE SICK - ENTRAINMENT OF TWO NEMF

In 1973, Academic V. Kaznacheev after many years of work with 10,000 different experiments confirmed the results of Gurvich of 1923. He found that a sick cellular culture can influence from a distance a healthy cellular culture and can make it sick of the same virus or plaque (1). The emission of the sick culture was in the UV-diapason for some agents, but was in the IR for cancerous tissue. It was quite obvious that the sickness had modified the nonlinear electromagnetic field (NEMF1) and after a while the NEMF2 of the healthy culture was adopting the modified nonlinear electromagnetic field of the sick culture and as a result it was becoming sick.

However, Acad. Kaznacheev was obviously not familiar with nonlinear physics. If he were, he would know that in nonlinear physics this is called entrainment – the sick cellular culture has entrained the healthy cellular culture to its distorted by the sickness frequencies and as a result the healthy culture became sick. Since only nonlinear fields can entrain, the fact that such distant influence between two cellular cultures exists is a proof that both cellular

cultures have nonlinear electromagnetic fields, i.e. they are NEMFs.

Gurvich was right that the field involved in distant communication between two cellular cultures is weak and Acad. Kaznacheev was right that the distant communication is informational in character. However, they both were not familiar with nonlinear physics and as a result of this they were not aware that the weak informational field they observed is nonlinear. This nonlinear electromagnetic field (NEMF), with which the cells communicate, plays essential role in growth and aging of all living beings, and it is missing in cancerous tissues. However, our science refused to study the weak informational NEMFS of the aura (Spirit), which rules and regulates everything in the body (and the NEMF of the material body) for centuries, why they should be a central topic.

## 6 | THE ENTRAINMENT DOCTORS - PATIENTS

Before to end this article, I want to draw your attention to the fact that the average lifespan of medical doctors in the US is 58.5 years, while the average lifespan of the rest of the people is 75 years. While such a difference? It is because the medical doctors deal with sick people all the time and the sick ( $NEMF_{material\ body} + NEMFS_{Spirit}$ )s of their sick patients are negatively influencing the doctors' ( $NEMF_{material\ body} + NEMFS_{Spirit}$ )s. Is there a way out? Yes, there is.

We need to make our medicine preventive medicine. Then the doctors will deal all the time with healthy people, trying to keep them healthy. Only then will the doctors live as long as the rest of the people – 75 years. If the US refuses to have social medicine, it must have at least preventive medicine, which makes money for trying to keep the people healthy instead of making more money when keeping the people sick.

## 7 | CONCLUSION

The article explained the distant influence of sick cellular culture on healthy cellular culture as entrainment of the NEMF2 of the healthy cellular culture by the distorted by the virus NEMF1 of the sick culture. The much shorter lifespan of the medical doctors was explained as entrainment of the doctors' (NEMF<sub>material body</sub> + NEMFS<sub>Spirit</sub>)s by the patients' sick (NEMF<sub>material body</sub> + NEMFS<sub>Spirit</sub>)s – preventive medicine was suggested as solution of the problem.

The observed correlation between coupled elementary particles with opposite spin when separated at very large distances will be the subject of the next Chapter 6.(10) Einstein called it “Spooky Action at a Distance” because a basic postulate in his relativistic theories was that ether does not exist, and if there is no ether, there is no way to explain the correlation or interaction at such large distances.
